

Green Infrastructure Student Poster Session Guidelines

The Student Poster Session will be visited by many workshop participants who encompass a large variety of technical expertise and come from a number of different backgrounds. In order to maximize the impact of your poster presentation, please ensure that your poster is clear, concise and suitable for a wide range of audience members. Given the hybrid nature of the Green Infrastructure (GI) Workshop, you will need to prepare both a PDF and video for your poster in addition to a physical version, based on the following guidelines:

1. You must register for the workshop and poster session indicating your intent to submit a poster no later than **March 1st, 2022**.
2. The final PDF version of your poster as well as your final MP4 Poster Video (see details below) are due on **March 30th, 2022** submitted via [this Box Upload link](#). No paper needs to be submitted at this time.
3. The size of your poster should be **36 inches x 44 inches** or **ISO/DIN A0**. Posters must be in landscape orientation. There is no standard template that you are required to use as long as the size and orientation requirements are met.
4. Please include your poster ID number on the top right corner of your poster. Your poster ID number will be issued to you upon registration when you indicate that you plan to submit a student poster.
5. Your poster should include a clear statement of the problem you are addressing, essential experimental details, key results and a *simple* summary and conclusions.
6. **Text should be minimized.** Judges and attendees will have very little time to read many details. The title text should be readable from 6 m (20 ft) away (~90-point text). The body text on your poster should be large enough to be legible at 1.5 m (5 ft) away (~36-point text).
7. Posters must include graphs, tables, figures and/or images. These should be large and clear enough to see from a distance. Do the graphs include clearly labeled axes, clear legend, and a short clear title? Is the resolution of the images adequate (~300 dpi)?
8. Posters should be self-explanatory; they should not require additional verbal explanations. Your verbal presentation should work only to enhance the content of your poster.
9. Posters will be judged on technical content, use of scientific method, potential impact on the community, novelty of approach, and aesthetic quality of the poster. The use of expensive and elaborate materials is discouraged.

10. Once you submit your poster, you must prepare a 1-minute video to share your poster in the virtual format based on the following guidelines:

Poster Video Preparation:

- Video must be **1 minute** (60 seconds) or less in length.
- The video should enable the audience to understand your work better and encourage them to ask specific questions.
- Video must be presented by a student, **not** an advisor. There are no exceptions.
- Video can utilize zooming to different areas of the poster using software (PowerPoint, Adobe Acrobat, Prezi) to ensure the font is readable to the audience. Alternatively, the poster can be re-made into slides, but no additional information can be added if not present in the poster submitted for review.
- Video must **not** include the author standing in front of a large display of the poster. Instead, a screen capturing software with narration should be used (PowerPoint, Zoom, etc.).
- Video must be in an HD (720p or higher) MP4 format
- Video naming convention must be PaperNumber.LastName.mp4
- Video should be free of commercialism

Prizes:

- Posters will be judged during the lunch hour of the workshop for a cash prize.
- Judges will select First, Second, and Third place winners. Selected winners will need to complete a W-9 (available on-site) in order to receive their prize.
 - First Place: \$250
 - Second Place: \$150
 - Third Place: \$100

Any questions should be sent to aliede@email.arizona.edu
